GOLD MINER VOLUME OSCILLATOR

It is about 1% under a Upside Cross-over, which may make it a very close and early signal. GDXJ has yielded an early buy signal as of Friday for a service that I co-ordinate with on readings and signals.

As you will see from my GREENFLASH PRIORITY MESSAGE on the next page, I do think we are positions for some sort of start of a rally, big or small, and so look for a serious heads up here.

5 RULES OF SMACKDOWN

1. Always imposed at time of **ILLIQUIDITY**, middle of the night or so for their skullduggery.
2. Never a "drift-down" due to lack of interest, but rather a **SPIKE-Down** !
3. **Volume at tsunami level**, larger than the exchanges, some % of national or Global production.
4. Always **Un-Economic**, in that it is **DUMPED**, rather than fed into the system to make the most profit.
5. **Rebound** and "Back & Fill" movements eventually render the Smack-Down impotent by returning the metal to a higher level, **recapturing** all the previous downmove

These are first five signs I can think of off the top of my head as I work to understand how the shenanigans of the US and Global Western Govts fail to address let alone resolve Global Systematic Financial Failure.

Published that in my blog Jan 2014, after watching all the silliness of "Smack-Downs".

FLASH PRIORITY MESSAGE – May 31, 2014

Been to the Tropix? Seen the "Setting Sun Green Flash "? We may have just seen the Equivalent of the REVERSE GREEN FLASH,

Which would of course occur before Dawn, if there were such a phenom. Here it's just a metaphor, but looking at the 10 min chart below, you might wonder why the volume just went nuts to the upside during that last hour of trading yesterday. **Note the GREEN Ellipse @ noon.**

Seems to me, if you look at Noon, when the Krimex Kriminals ran out of fuel, the GDX Doji'd @ 21.94, and it was off to the races after that.....never looked back. Now that everyone has had the snot scared out of them, the stage could be set, given our huge over-extension to the Downside(oversold), the signal that this condition is terminated is the MACD crossover. So far the daily has not, but the 2 hour has so, it will be up to next weeks action to demonstrate whether the probabilities favor the development of Escape Velocity from the Over-Extension Saturation(Downside).

My choice as to a standout on technical merit is **AR.To, US PINK ARNGF** [Information contained is for instructional & educational purposes only.
