

# NEVADA COPPER / NCU.TO

Nevada Copper (TSX:NCU) owns Pumpkin Hollow, a copper project that aims to commence production by the end of 2019. Located in Yerington, Nevada (USA), Pumpkin Hollow is host to an underground development and an open pit development. The project's substantial reserves and resources include copper, gold and silver and the district of Yerington is host to multiple other, undeveloped deposits. With global mine supply declining and demand increasing, this is the right project at the right time. Copper is soon to be in vogue again once the trade deal is settled. Every new house built in California is mandated to have solar panels which could spread to the rest of the nation, as "Green Energy" continues to grow exponentially.

## LATEST NEWS

### EAST MAIN SHAFT

Total Lateral development to date has now advanced 4,900feet on both levels and has reached the bottom of the East North ventilation shaft.

Alimak infrastructure has been installed and the Alimak has advanced vertically 108 feet and this crew is developing the 3000 level loading pocket.

Three new mining fronts continue to make progress and they are: central ramp system, upper coarse ore bin (COB) access and upper geotechnical test stope access.

From the 2770 level, the team is advancing the COB lower excavations and making very good progress advancing the lower access toward the geotechnical test stope.

We have now advanced the drilling of the paste borehole over 600'. This borehole will be utilized for pastefill delivery as well as cement for construction needs.

Up next: Continue driving the Alimak 3000 level loading pocket, drive the 2770 access to the bottom of the geotechnical test stope and drive the 2900 level ramp to intersect the paste borehole.

## Senior Management of Nevada Copper

### Matt Gili - President & CEO

- \*20 Years' Experience in Mining Industry
- \* Senior Executive Roles at Barrick & Rio Tinto
- \* Knows how & what it takes to run a successful mining operation
- \* hands on get dirty w crew approach to leadership

### David Swisher - VP of Operations

- \*23 years' experience developing underground & open-pit mines
- \* senior operating roles in various mines throughout North America

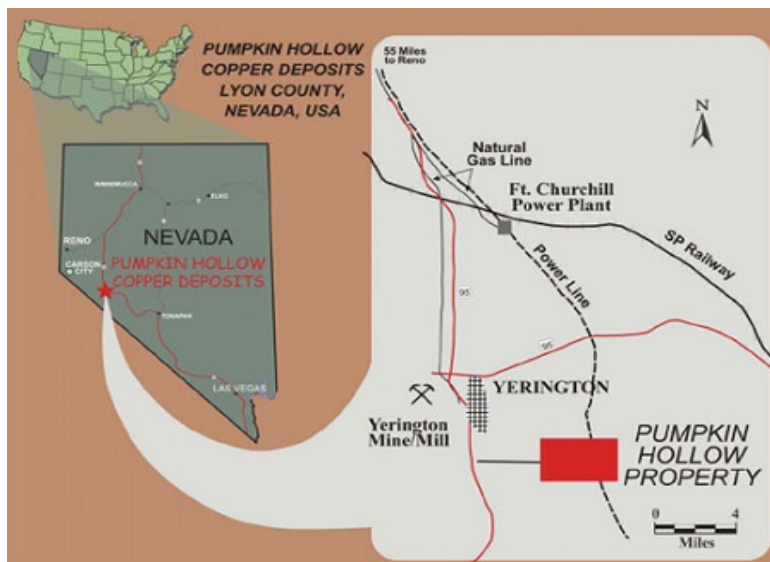

### Greg French – VP of Exploration & Project Development

- \*Senior Geologist w over 25 years of exploration experience
- \* extensive project development w two projects from feasibility to production

### Rich Matthews – VP Investor Relations & Marketing

- \*successful & experienced IR background
- \*international network which includes solid ties to the financial markets
- \* fully understands new media markets & digital marketing trends

The “Sweet Spot” in sports refers to the perfect location on a baseball bat, golf club, etc... to get the absolute maximum thrust to send your target in a full a powerful trajectory. Similarly, in investing I am always looking for companies that I feel are in the “Sweet Spot” and ready to take you on a long profitable journey. I feel NCU is in such a spot, ready to start production in the very mining friendly locale of Nevada. It boasts water, power & infrastructure and their main commodity Cu is in high demand with dwindling supplies ... the perfect recipe for profits. Click here for my previous report on NCU.<https://kdblueskymarketing.com/wp->

5 Billion (yes Billion with a B) pounds of copper, that is awaiting to be mined. It is easily accessible, very cost efficient and waiting to be unearthed. The mine life is expected to be at least 20+ years.

Oddly the underground portion is being mined first as that is where the previous management spent over \$220 Million in infrastructure that brought us to this point. Production is scheduled to begin in Q4 of this year and that is what being invested in the sweet spot is all about.

Commissioning of the Pumpkin Hollow Mine should start in the fourth quarter of 2019, and the underground mine should reach 5,000 tons per day by mid-year 2020. Together the underground and open-pit assets have more than 5 billion lbs. copper, which would sustain a 23-year mine life. The underground part of the project has a 13.5-year mine life based on reserves of 23.9 million tons grading 1.74% copper-equivalent. The underground mine will produce an average 50 million lb. copper, 8,000 oz. gold and 150,000 oz. silver a year at all-in sustaining costs of US\$1.96 per lb. copper.

My newsletter is named after my boyhood idol, Mickey Mantle. Reason is the "Mick" used to swing for the fences. He not only hit a ton of homers but he was the King of the Grand slam. That is what I do with Mick's Picks. We aim to knock it out of the park with the companies we select. The companies who sponsor my website or whom I own shares in, have been carefully vetted and researched. Do we always hit homers... of course not, but some of my winners produce staggering returns. There is no better time to buy juniors than during the summer doldrums. Most companies are at their 52-week lows now. Copper is soon to break out of its mutli year slumber. IMHO now is the time to scoop up undervalued, unknown juniors with strong management and stellar properties in safe jurisdictions. NCU fits this to a tee.
