RONALD L. ROSEN

REPORT

We are not only living with a bull market in gold, we are living with a potentially monster bull market in gold! The message is loud and clear. All we have to do in order to see this clearly is ignore the fumbling and mumbling of active daily and weekly traders - be they amateurs or so called professionals.

We won't see this long term corrective pattern very often, if ever, in any stock or commodity. However, leave it to gold and silver to show us the way via this magnificent indication of what we are about to witness. Oh yes, and leave it to the Federal Reserve to be the cause that helped produce this effect.

Simply align the quarterly charts of gold, silver, the Dollar Index, and the Dow Jones Industrial Average and you will see the handwriting on the wall.

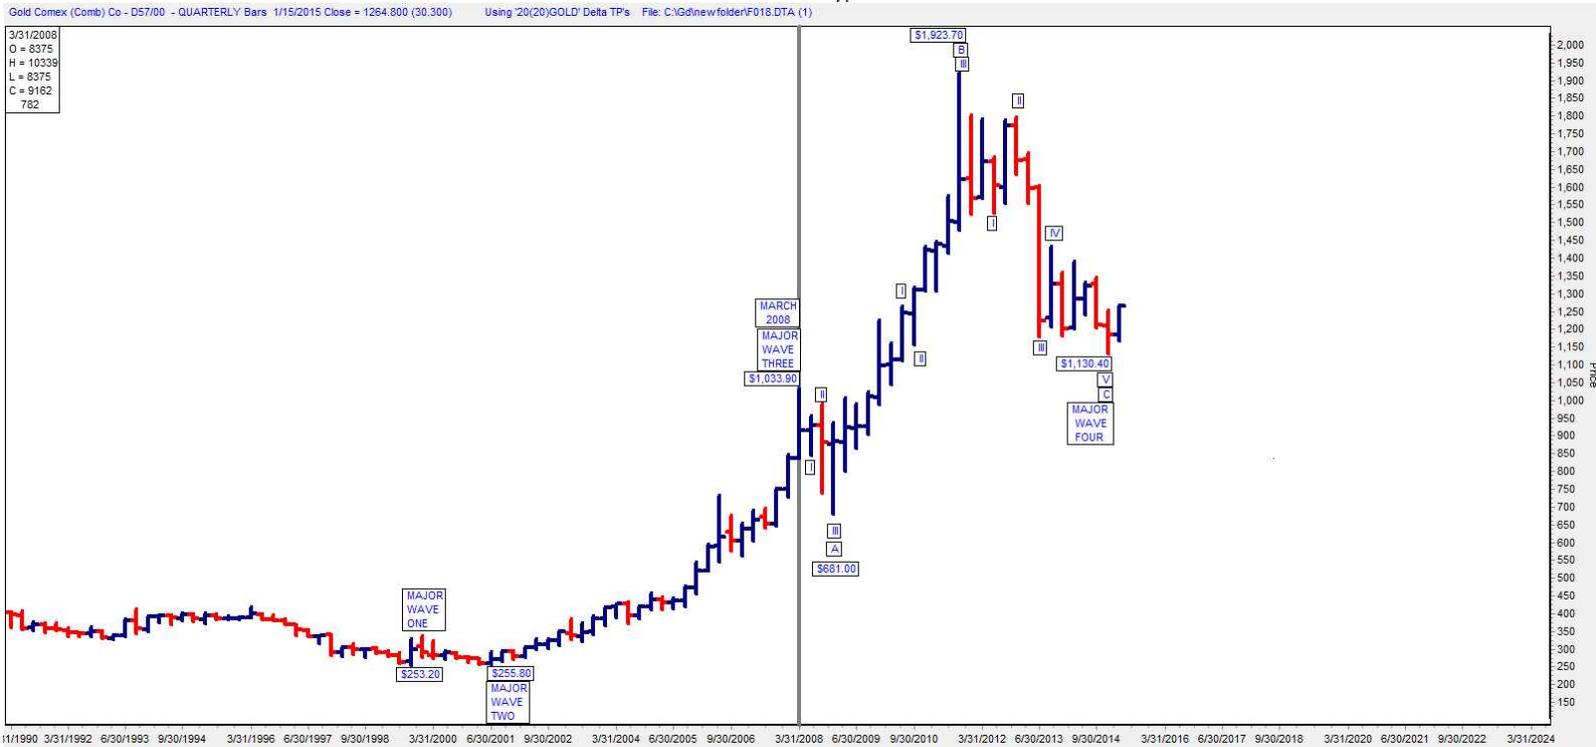

Welles Wilder's Delta Long Term turning points are the icing on the cake. This is the type of icing that only Mother Nature can make. You know the expression:

DON'T MESS WITH MOTHER NATURE.

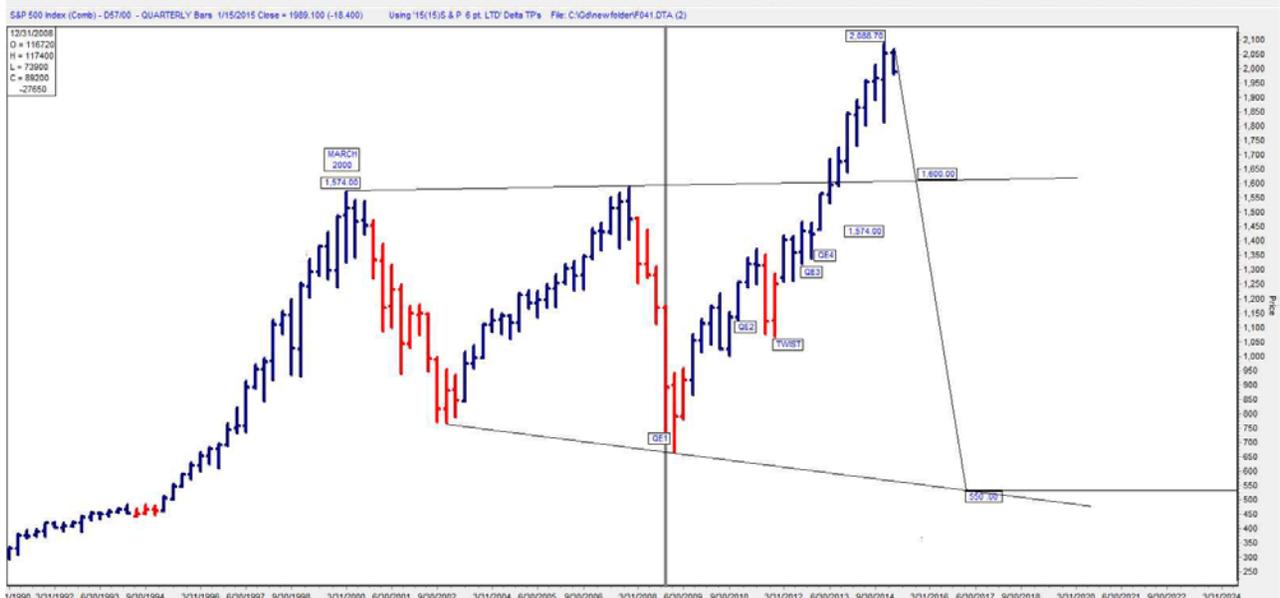

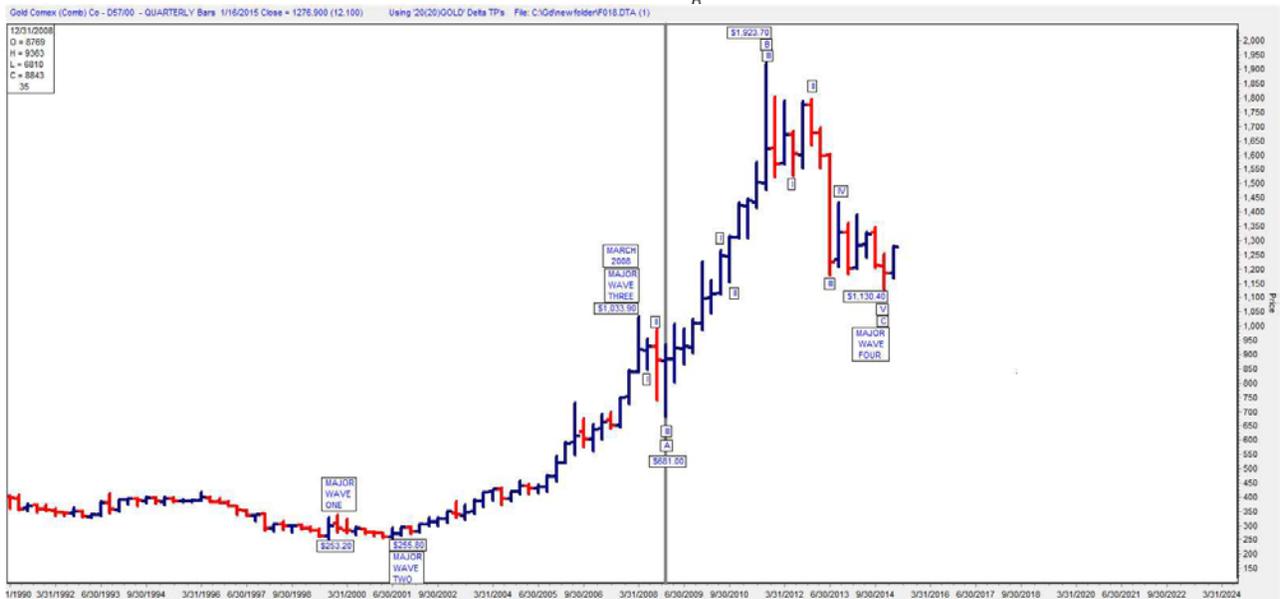

Indeed it is a rare occasion when a correction in a bull market ends at a higher price than it was when the correction began. That is what gold has accomplished. The extent of the move to follow this type of correction should be monumental and not soon forgotten. We should expect a historic rise in price. The rise in the price of gold should take the entire precious metals complex to unimagined heights not yet recognized.

Running flat

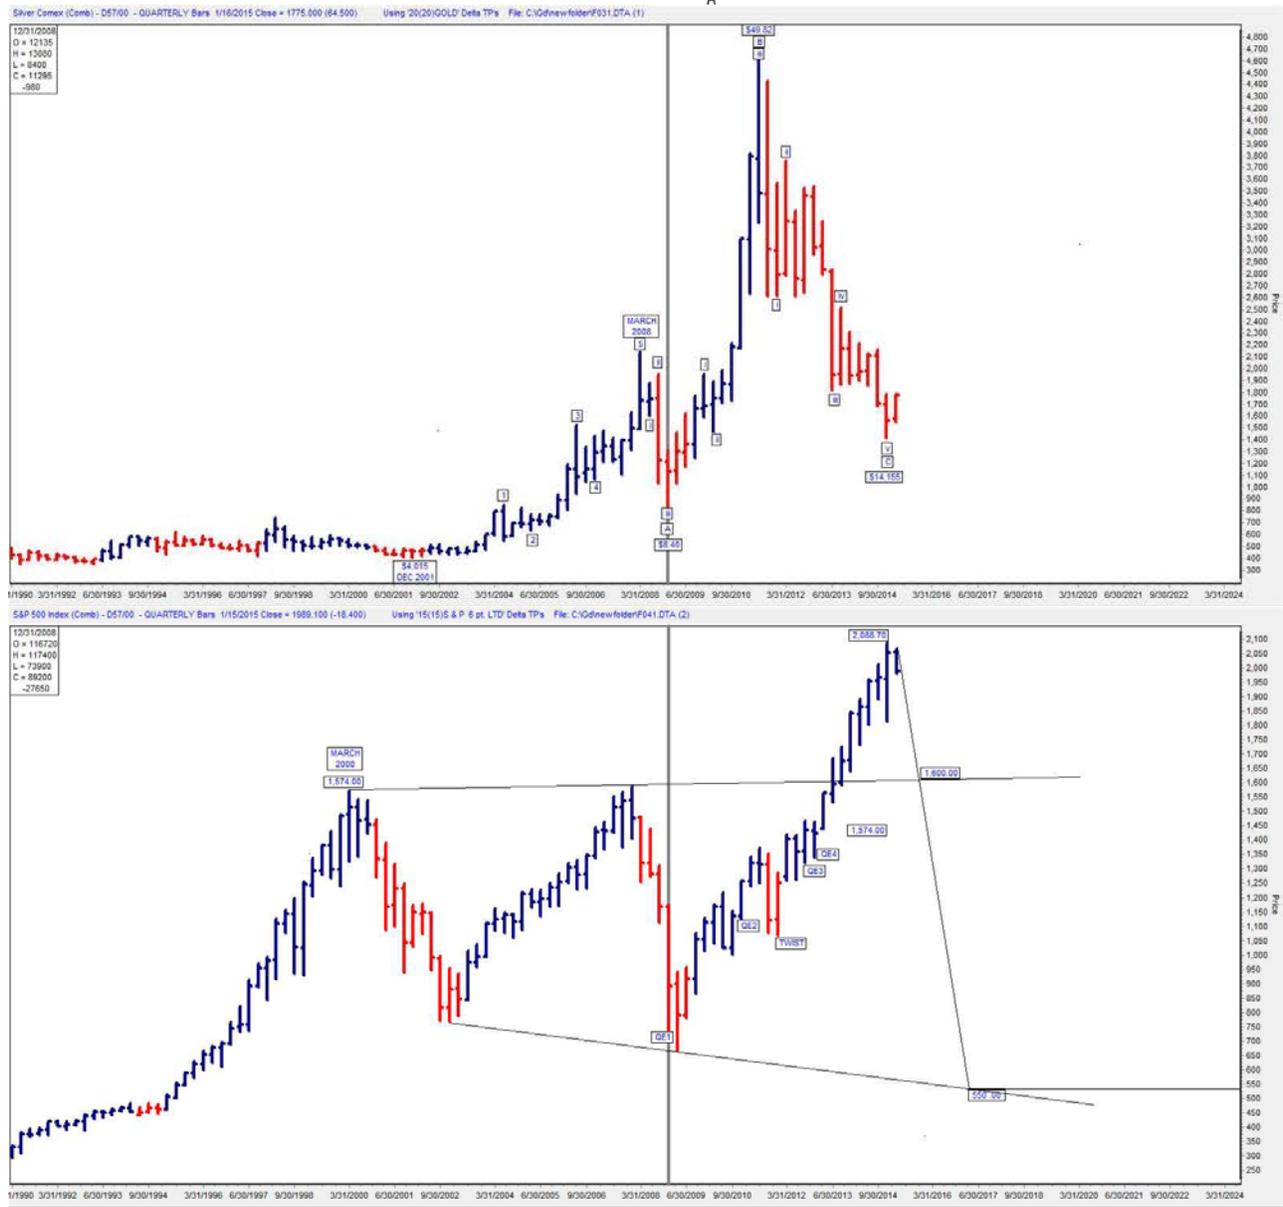

GOLD QUARTERLY

Gold topped at \$1,033.90 and began a normal correction. However, at the same time the S & P 500 and the DJIA were collapsing. This along with the termination of Lehman Bros. caused panic to reign in the Federal Reserve and the U. S. Treasury Dept. The advent of the QE's turned a normal correction in gold and silver into an extremely rare running flat correction. This running flat correction in gold began at \$1,033.90 and bottomed at \$1,130.40! To quote a well-known American comedian, "To the moon, Alice."

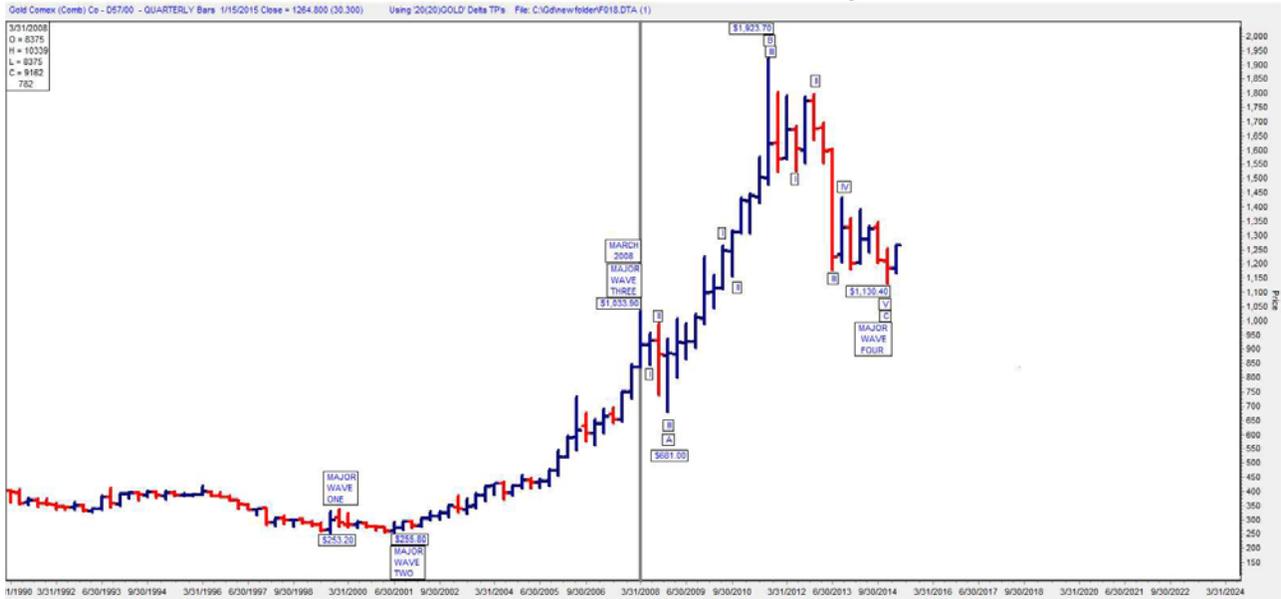

The effect of the QE's also resulted in a running flat correction in silver. The timing was similar to gold's timing. However, the bottom for silver occurred beneath the beginning of its correction. This means that the bull move in silver will be very powerful but the bull move in gold will be extremely powerful.

The proof that gold topped and began its running flat correction at the \$1,033.90 top is the fact that the Dollar Index bottomed soon after gold topped and began its A, B, C, bear market correction. Gold has bottomed and the Dollar Index either has or soon should top and head down in a big way.

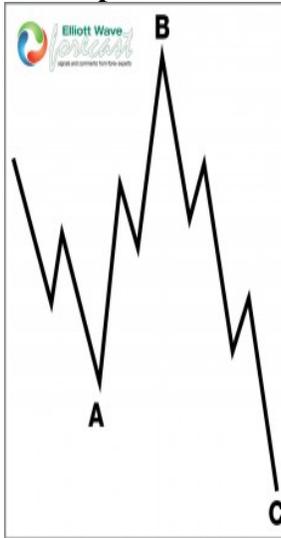

GOLD QUARTERLY

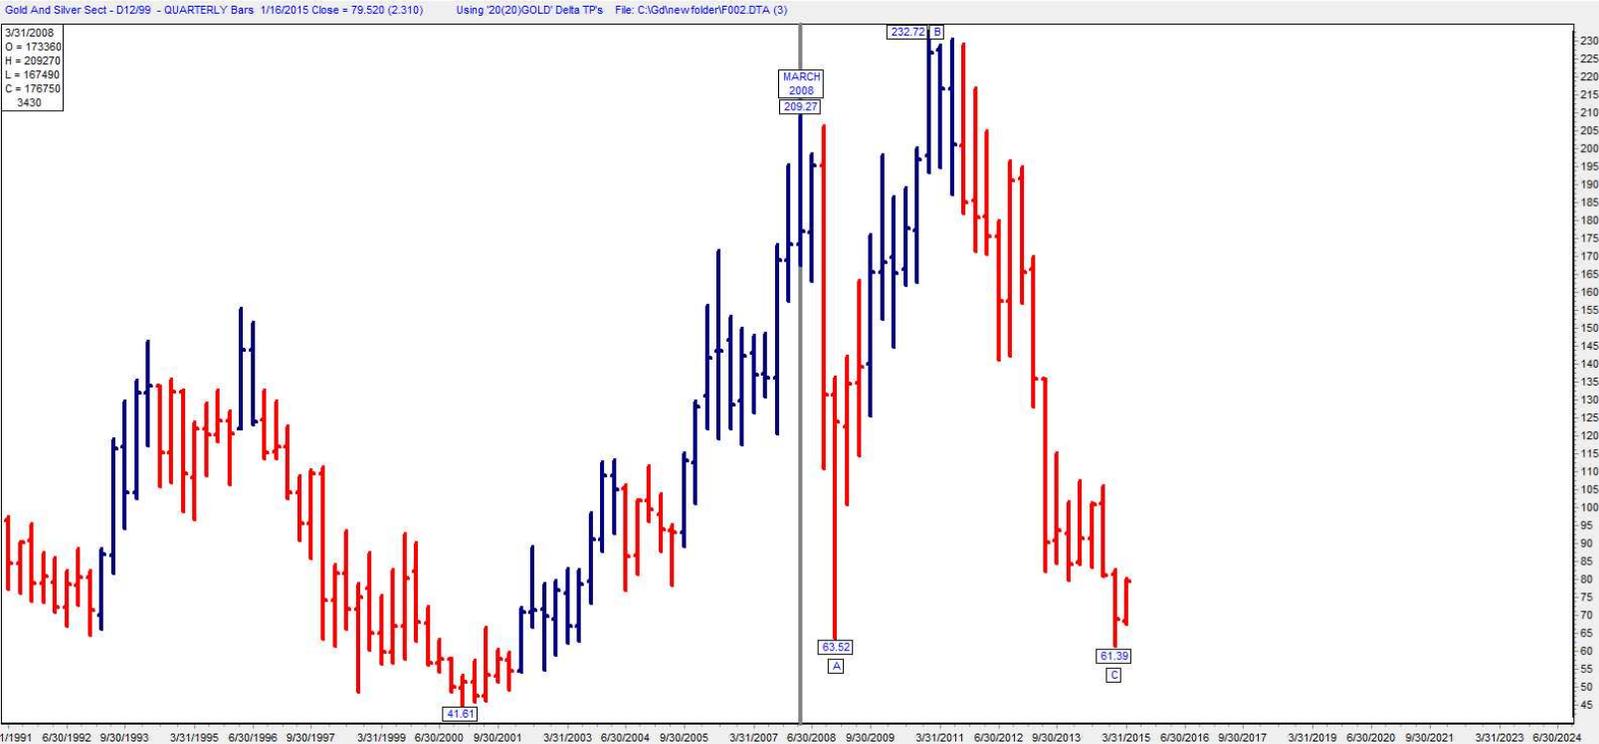

DOLLAR INDEX QUARTERLY

The correction in the XAU and the HUI is called an *Expanded flat*.

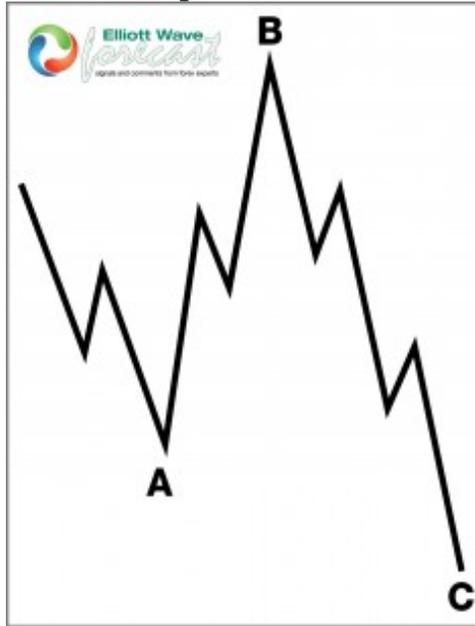

Expanded flat

XAU QUARTERLY

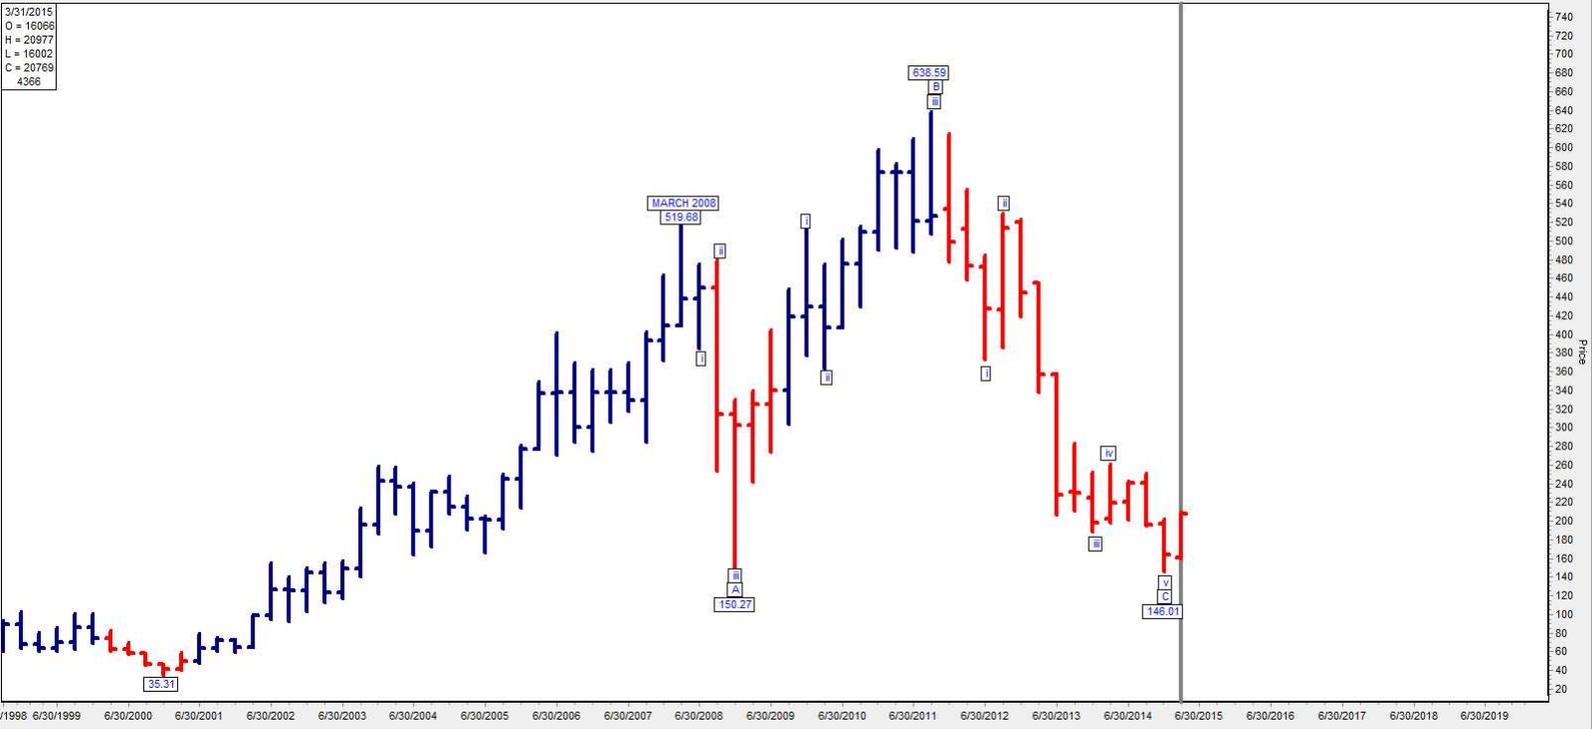

Expanded flat

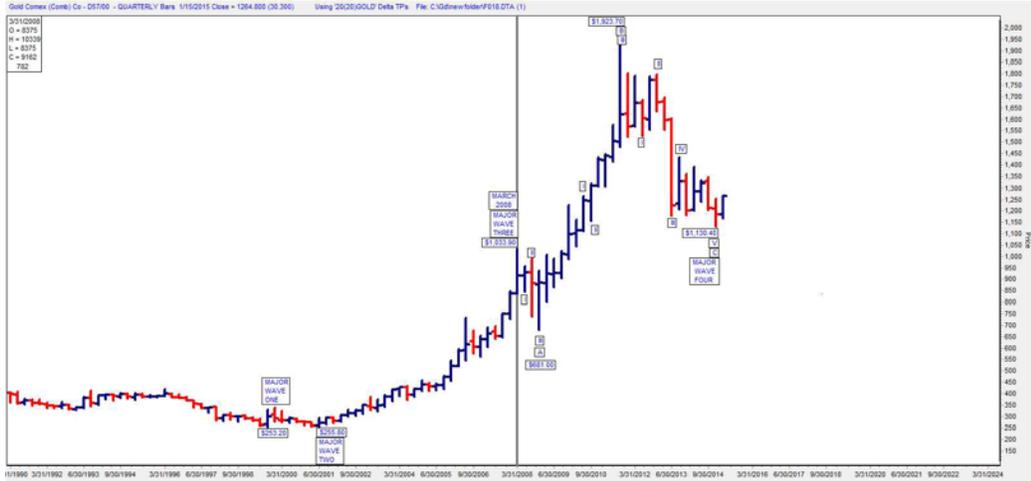

HUI QUARTERLY

Amex Gold Bugs Index - D12/99 - QUARTERLY Bars 1/20/2015 Close = 207.690 (6.820) Using '20/20'GOLD' Delta TP's File: C:\Gdnewfolder\F001.DTA (2)

The correction in gold, silver, the XAU, and the HUI began at the same time and finished at the same time. The next move for all 4 should be a dynamic bull move to heights beyond most expectations. For precious metals bulls the move should be Q E “Quite Endearing.”

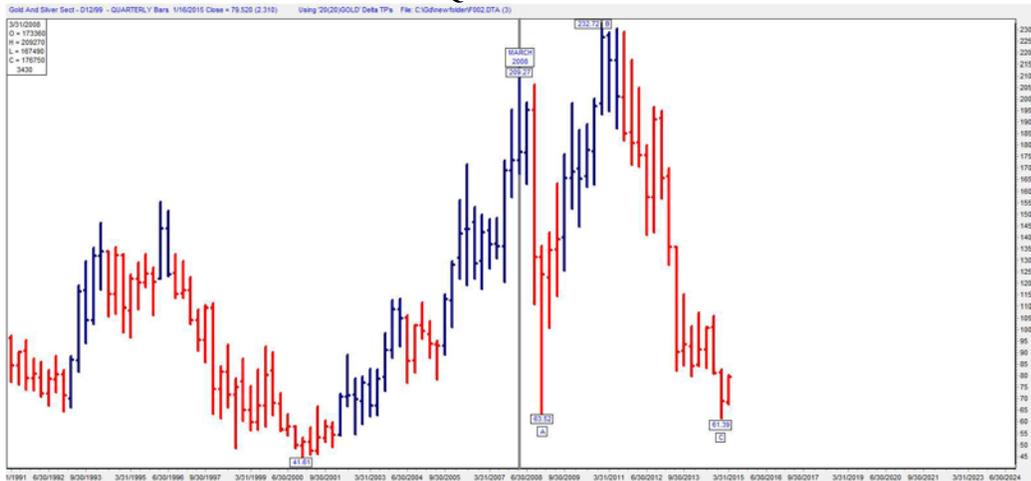

GOLD QUARTERLY

SILVER QUARTERLY

XAU QUARTERLY

Once again, a special message:

DON'T MESS WITH MOTHER NATURE.
