REPORT

The Main Theme

The main theme of this *REPORT* is to show that the *absolute highest probability* for the DJIA and the S & P 500 is a major collapse. It will be devastating to the citizens of the United States of America and our friends.

The evidence is overwhelming that a major collapse in the stock averages and a huge rise in the price of gold will begin in the near future. The collapse may begin within a month or two.

I have not seen the evidence in this *REPORT* presented anywhere else. I find this astounding because it is right in front of every analyst's nose if only they were looking in the right place.

It is easy to find. It is easy to read. It is beyond doubt that it is repetitive. It has been repeating for over 250 years.

To spend time currently worrying about an exact top in the stock averages or an exact bottom in gold should, in my opinion, be put aside. I believe it is best to spend your time concentrating on being fully prepared for the coming collapse in the stock averages and the monster bull move in gold. The rest of the precious metals complex should follow the lead of gold. The information presented on the following pages is **THE KEY** to market events and their timing.

I will be following this in just about every *REPORT*. If we are prepared it can be very profitable and even be fun. However, at the risk of losing friends do not tell anyone you are having fun while most of those around you are suffering. Moaning and groaning like everyone else around you is a good cover-up. I am serious when I write this, do not brag. However, you can mumble the number ...

“Using the connection, Keating and Snaith not only explained why the answer to life, the universe and the third moment of the Riemann zeta function should be 42, but also provided a formula to predict all the numbers in the sequence.”

SEEDMAGAZINE.COM April 10, 2014

[Prime Numbers Get Hitched](#)

Incubator / by Marcus du Sautoy /

“In their search for patterns, mathematicians have uncovered unlikely connections between prime numbers and quantum physics. Will the subatomic world help reveal the elusive nature of the primes?

There is an important sequence of numbers called “the moments of the Riemann zeta function.” Although we know abstractly how to define it, mathematicians have had great difficulty explicitly calculating the numbers in the sequence. We have known since the 1920s that the first two numbers are 1 and 2, but it wasn’t until a few years ago that mathematicians conjectured that the third number in the sequence may be 42—a figure greatly significant to those well-versed in *The Hitchhiker’s Guide to the Galaxy*.

It would also prove to be significant in confirming the connection between primes and quantum physics. Using the connection, Keating and Snaith not only explained why the answer to life, the universe and the third moment of the Riemann zeta function should be 42, but also provided a formula to predict all the numbers in the sequence. Prior to

this breakthrough, the evidence for a connection between quantum physics and the primes was based solely on interesting statistical comparisons. But mathematicians are very suspicious of statistics. We like things to be exact. Keating and Snaith had used physics to make a very precise prediction that left no room for the power of statistics to see patterns where there are none.

Mathematicians are now convinced. That chance meeting in the common room in Princeton resulted in one of the most exciting recent advances in the theory of prime numbers. Many of the great problems in mathematics, like Fermat’s Last Theorem, have only been cracked once connections were made to other parts of the mathematical world. For 150 years many have been too frightened to tackle the Riemann Hypothesis. The prospect that we might finally have the tools to understand the primes has persuaded many more mathematicians and physicists to take up the challenge. The feeling is in the air that we might be one step closer to a solution. Dyson might be right that the opportunity was missed to discover relativity 40 years earlier, but who knows how long we might still have had to wait for the discovery of connections between primes and quantum physics had mathematicians not enjoyed a good chat over tea.”

—Marcus du Sautoy is professor of mathematics at the University of Oxford, and is the author of The Music of the Primes (HarperCollins). Originally published March 26, 2006

“The first great monetary panic in modern times which we need notice, took place in 1764 in Holland and neighboring countries.”

1764 plus 42 = 1806

1806 plus 42 = 1848

1848 plus 42 = 1890

1890 plus 42 = 1932

1932 plus 42 = 1974

1974 plus 42 = 2016

THE MONETARY PANIC OF 1764

<http://oll.libertyfund.org/titles/bulletin-a-history-of-banking-in-all-the-leading-nations-vol-2>

“The first great monetary panic in modern times which we need notice, took place in 1764 in Holland and neighboring countries. The banks of Amsterdam, Hamburg and Nuremberg did not issue notes in the discount of bills. They were pure examples of what is called by a certain party the “Currency Principle.” That is, those banks did not issue any credit except in exchange for specie. Thus, the credit they issued was exactly equal in amount to the specie it displaced. This principle was that advocated by the supporters of the Bank Act of 1844, and of Sir Robert Peel, who considered it as the panacea for all commercial crises.

Depression of 1806/7

<http://247wallst.com/investing/2010/09/09/the-13-worst-recessions-depressions-and-panics-in-american-history/2/>

The Depression of 1806/7, which lasted about three years, was the result of English trade restrictions combined with the Embargo Act of 1807, which was passed under Thomas Jefferson as a means of preserving neutrality as tensions mounted between England and France. By restricting foreign trade, however, the United States paralyzed its coastal economy and destroyed businesses within the shipping industry. Furthermore, the embargo's primary aim failed as the country eventually was pulled into the War of 1812.

DECEMBER 2016

LTD # 4 LOW DUE DECEMBER 2016 DOW JONES INDUSTRIAL AVERAGE MONTHLY

The first important stop on the way down for the DJIA and the S & P 500 should be LTD # 2 low. If you are short the stock averages using any of a number of shorting instruments it will be time to take some profits. The first important stop on the way up for gold should be the grouping of LTD # 1 high and LTD # 2 high. We may be wise to take some profits at that point in time.
