Ah yes, is it really possible for 3 *simple charts* to show us how to make money and be properly aligned in the gold and HUI markets? It sure seems that way to me. Let's see, during the past 16 years the Money Flow Indicator told us when to buy, when to sell, and again when to buy. Simply buy or sell when the red trend line is crossed. No fuss. No Muss. The MFI is telling us it is time to buy! The only slight confusion may be that the price is going up when the red line is going down and the price is going down when the red line is going up. No problem. How does this chart provide us with buy and sell information for the stocks in the HUI?

GOLD QUARTERLY LOGARITHMIC

Once again the answer is simple. The quarterly gold chart with the MFI told us that during this 16 year bull market in gold there were two buy signals and one sell signal. The monthly chart of the HUI shows us that its highs and lows follow the monthly gold chart for step or if you prefer month by month. How's that for "The Simple Life.?"

GOLD MONTHLY

HUI MONTHLY

For \$35.00 a month you can enjoy the simple life.
