RONALD L. ROSEN
June 12, 2015

REPORT

Yes, June/July is often the seasonal low for the precious metals complex. This seasonal low time period is usually followed by a decent move up in gold, silver and their shares. However, this time we will not see a decent move up. The technical fact, and I repeat a rarely if ever seen or mentioned and probably little known technical fact, indicates that gold and silver once this seasonal low time period is past will experience a once in a lifetime bull move! It is the technical fact that makes it so and not just my opinion.

The fact is that the initiation of the Quantitative Easing process gave birth to the most bullish and most rare correction that any commodity can possibly experience. The first two charts show the time of birth of this rarest and most bullish possible correction in gold and silver. This is what the correction must look like in order to be considered an extreme rarity:

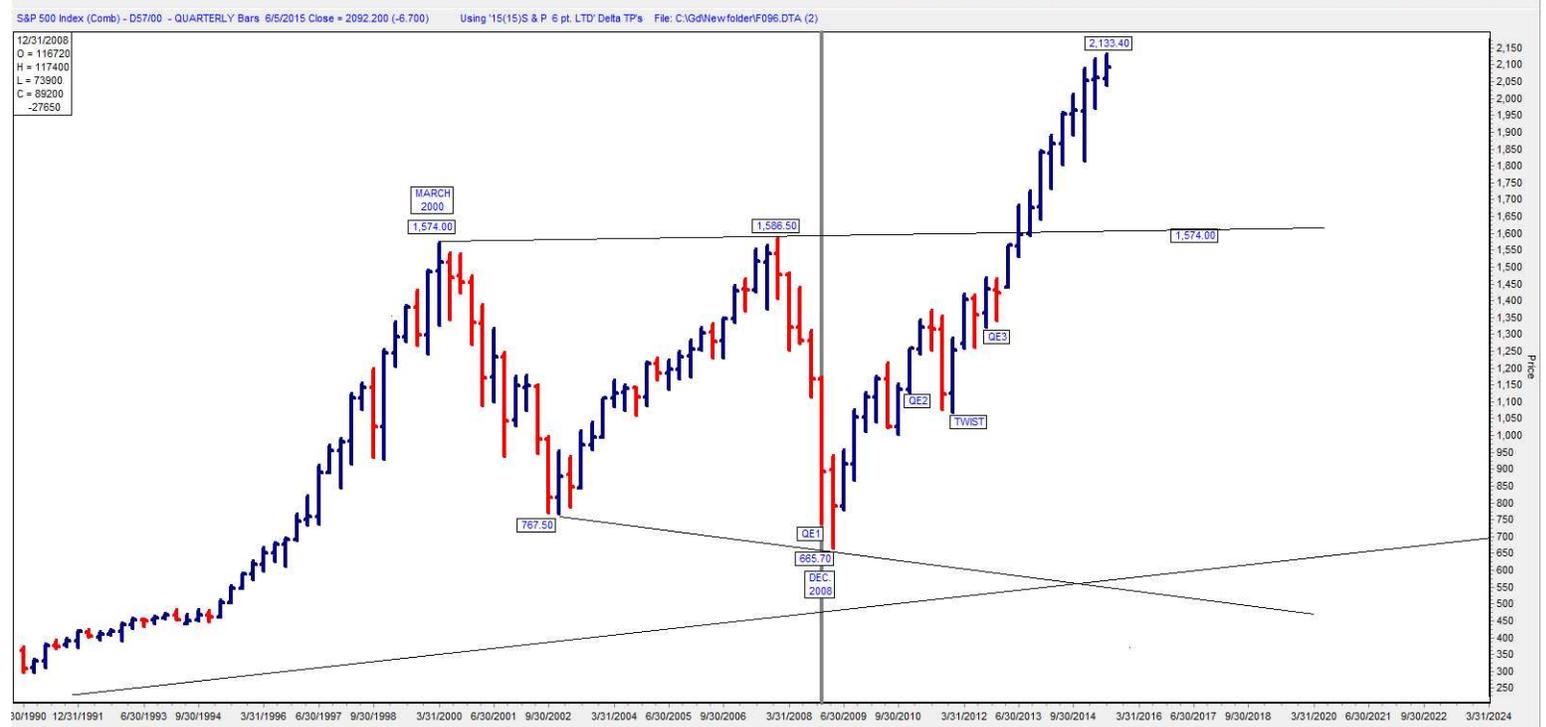

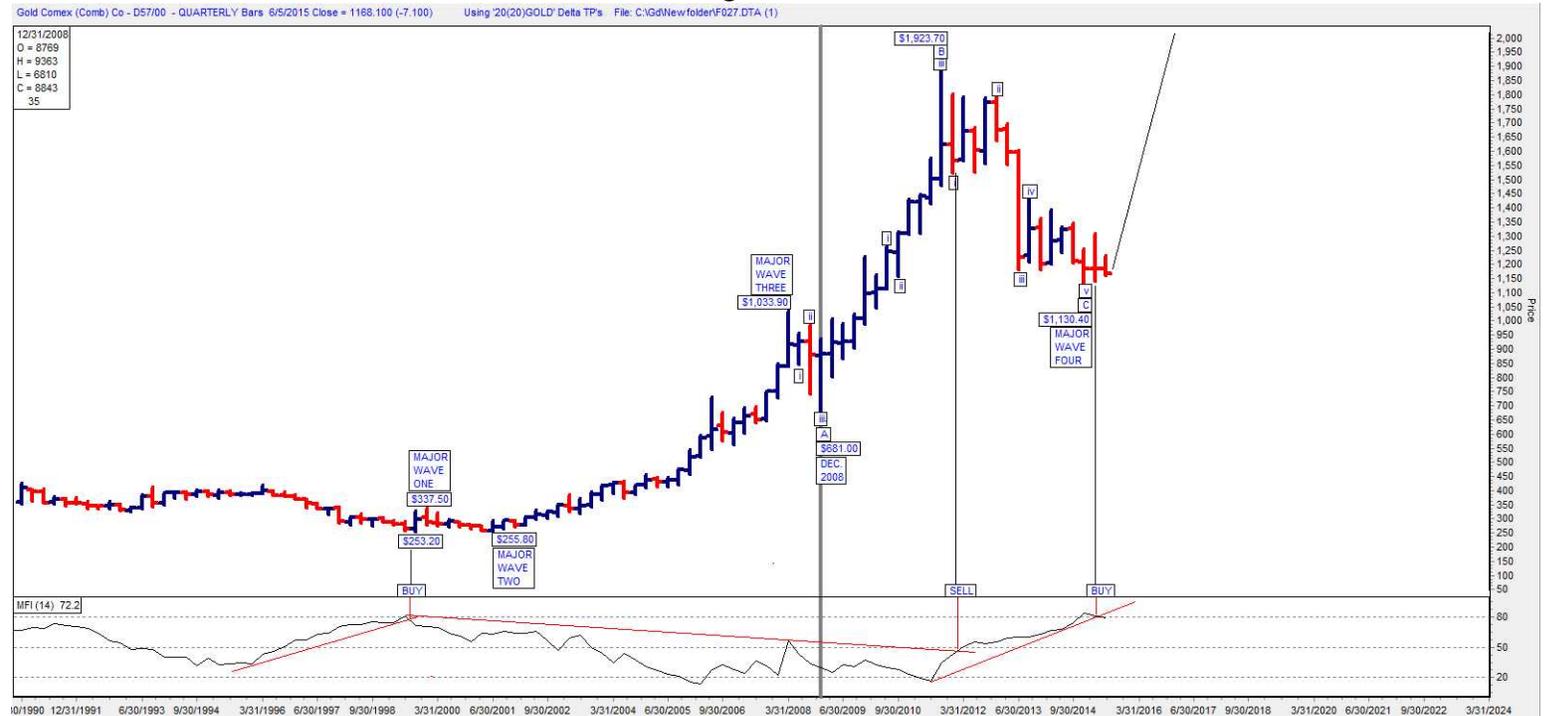

“The forces in the direction of the larger trend are so powerful that the pattern becomes skewed in that direction.” E. W. P.

Running Flat Correction

The S & P 500 chart shows when the Q. E. process began. The gold chart shows that at the same time the Q. E. process began, a correction in gold that was normal became the rarest and most bullish form of correction. This correction is a *Running Flat*. That moment in time will become known as the most devastating *Day of Financial Infamy*.

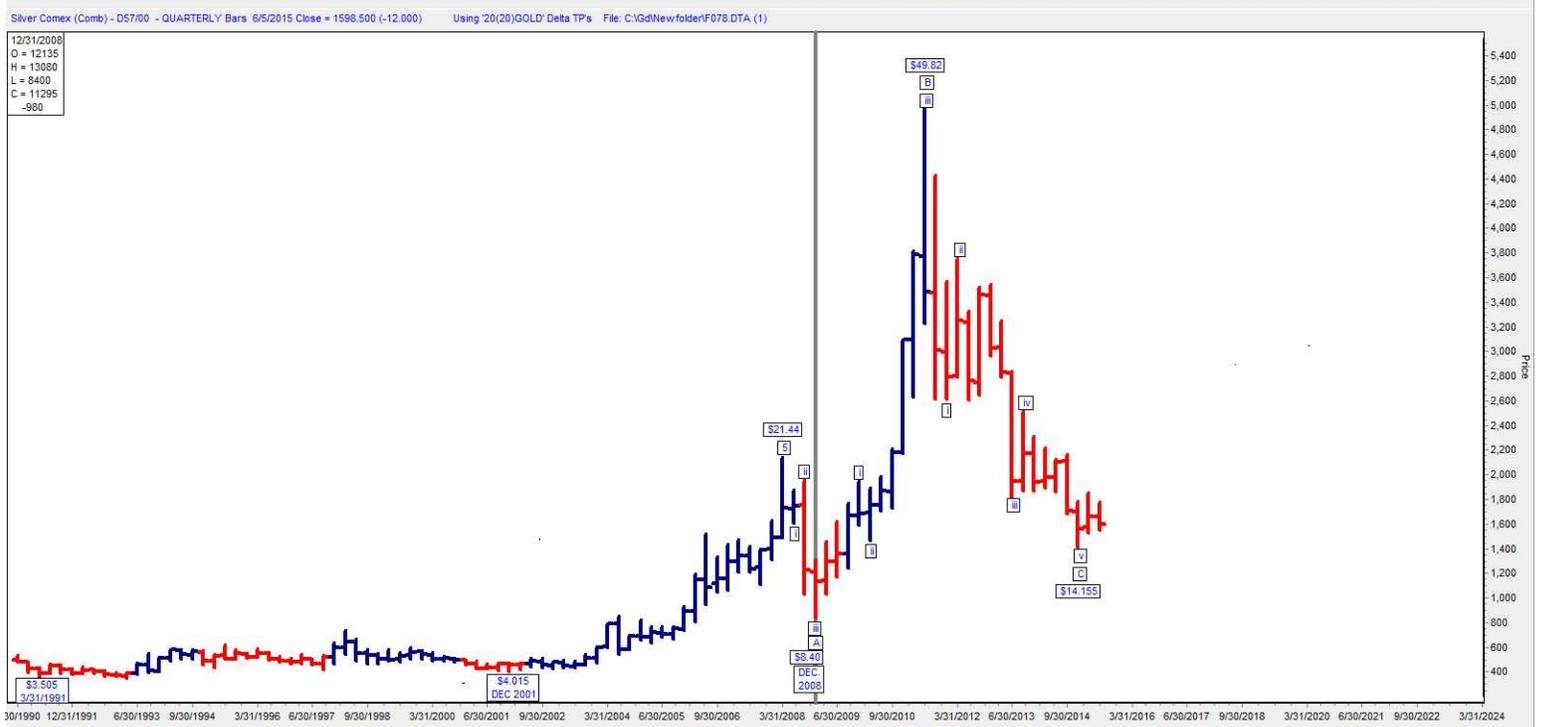

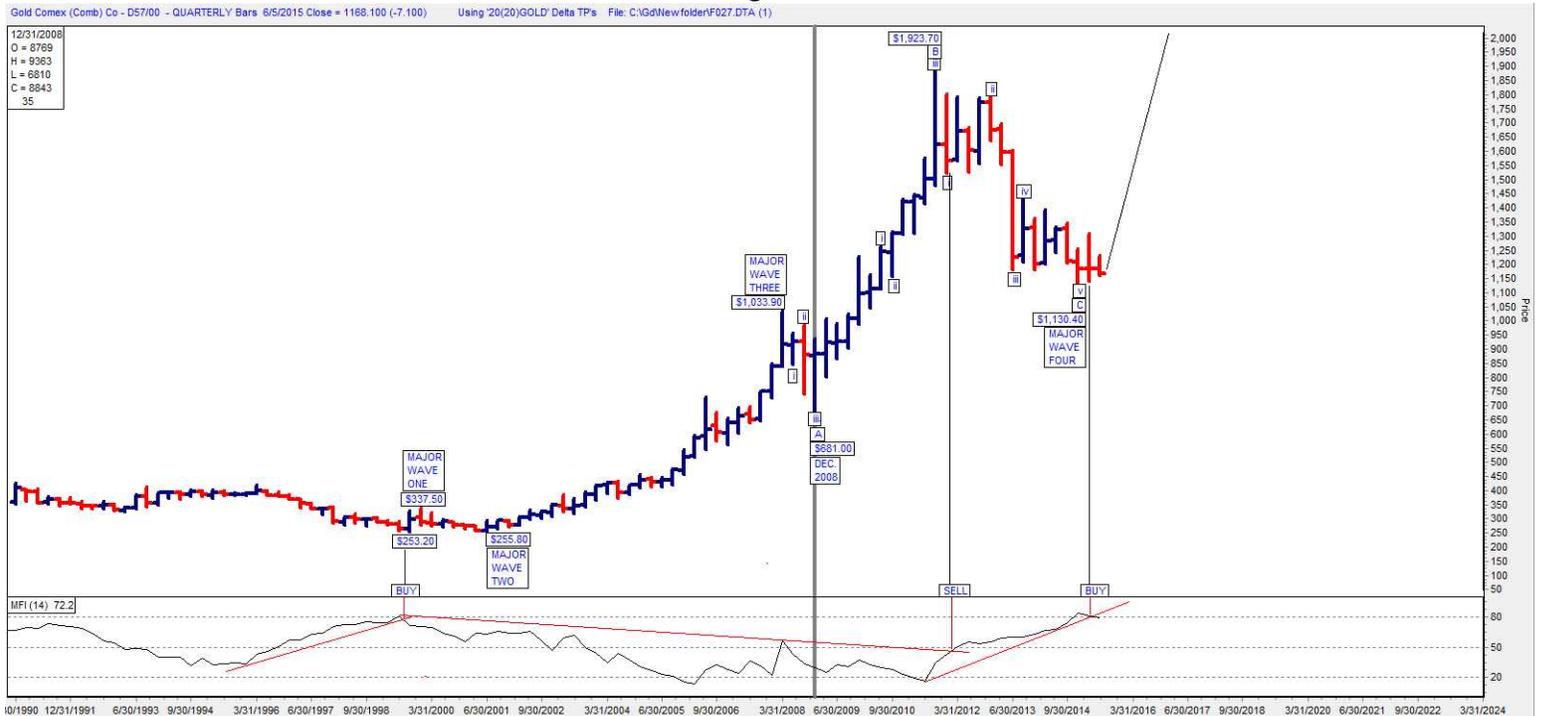

GOLD QUARTERLY

S & P 500 QUARTERLY

The silver chart also shows that at the same time the Q. E. process began, a correction in silver that was normal became the rarest and most bullish form of correction. This *Running Flat* correction in gold and silver will be followed by the most dynamic bull move that gold and silver have ever experienced. It will be sad times for those holding only dollars.

GOLD QUARTERLY

SILVER QUARTERLY

“The forces in the direction of the larger trend are so powerful that the pattern becomes skewed in that direction.” E. W. P.

Running Flat Correction

A Running Flat Correction must have three legs down, three legs up to a new high, and five legs down that do not go below the low of leg A down. Here it is in all its glory.

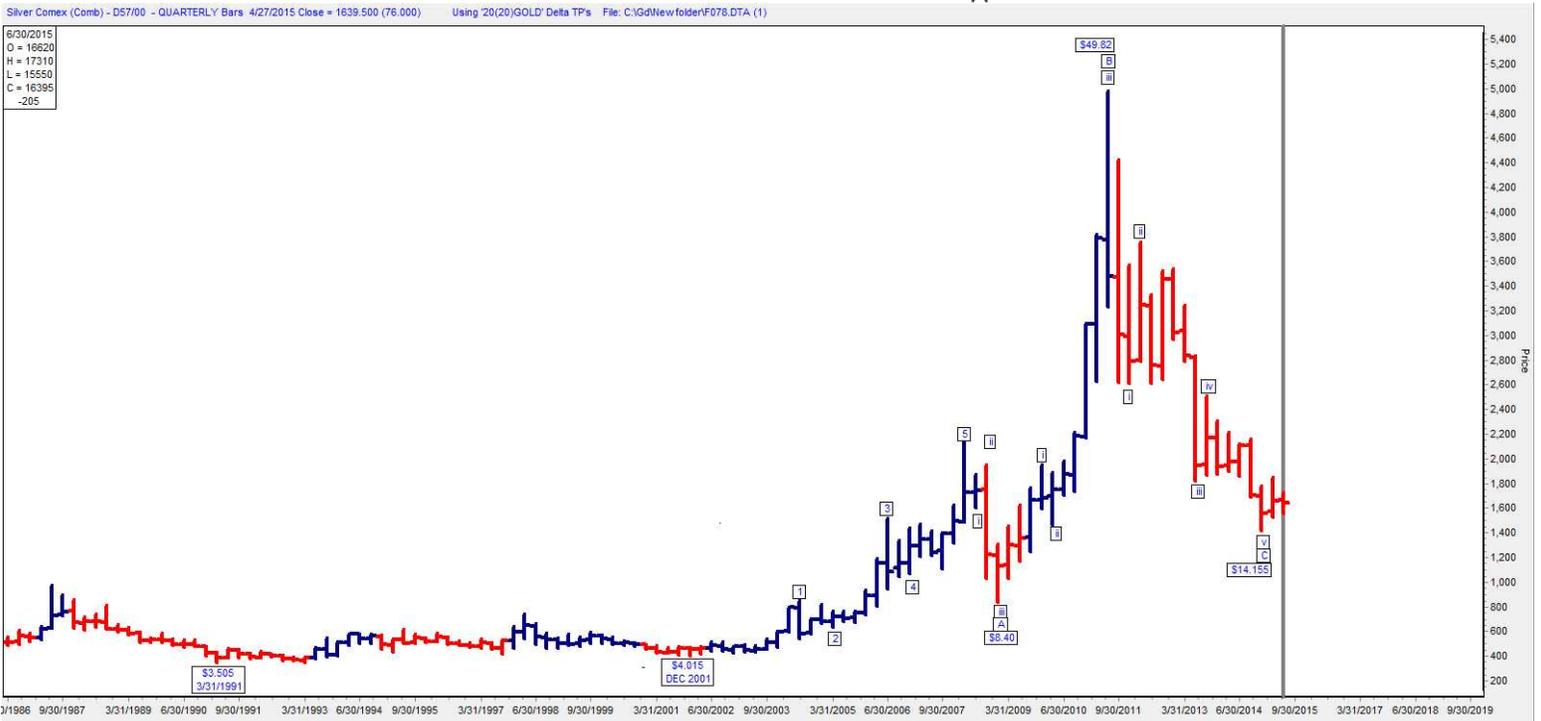

Running Flat Correction

GOLD QUARTERLY

The Running Flat Correction in silver is closer to perfection than the Running Flat Correction in gold. Silver just may outperform gold.

Running Flat Correction

The time is fast approaching when all seat belts should be secured!!
