REPORT

Crude oil has been making lower highs and higher lows since 2008. That pattern changed and crude oil finally broke up and out of the triangle. The most natural occurrence once the breakout occurred would be a return trip to the apex of the triangle. Once this is achieved a huge bull move should begin. It looks like the bull move started today.

CRUDE OIL MONTHLY

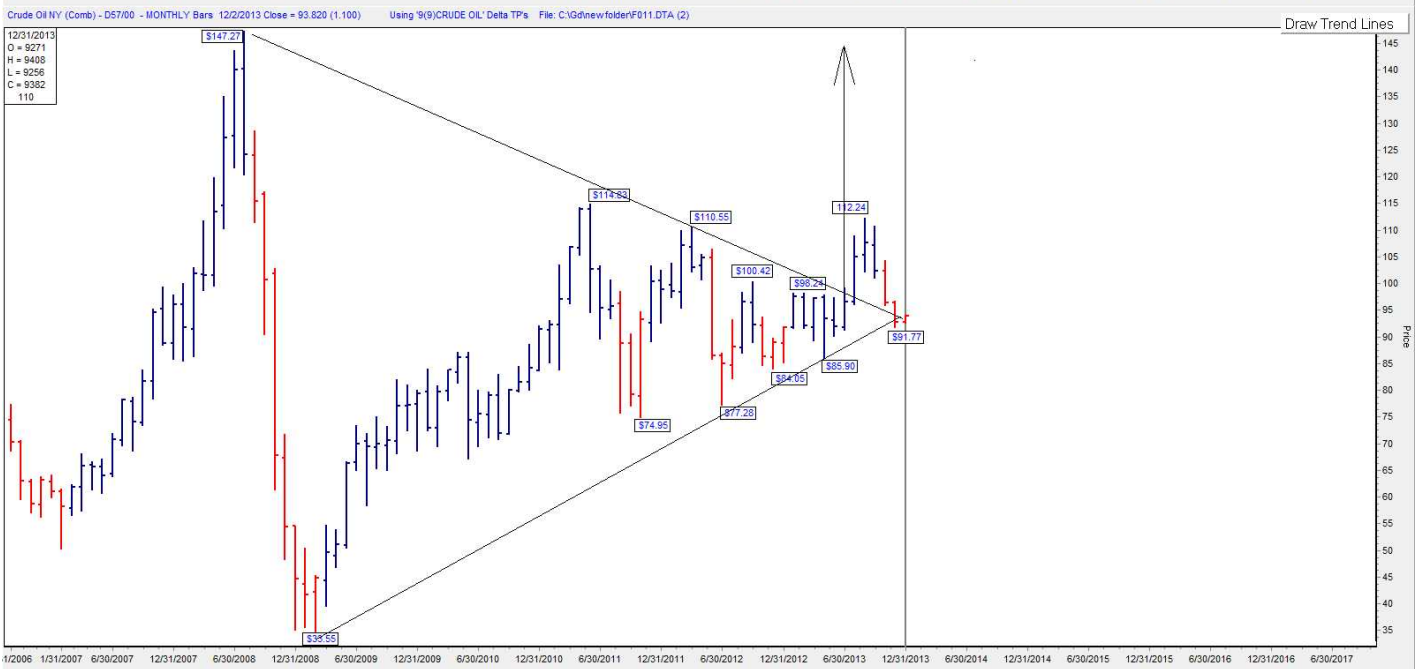

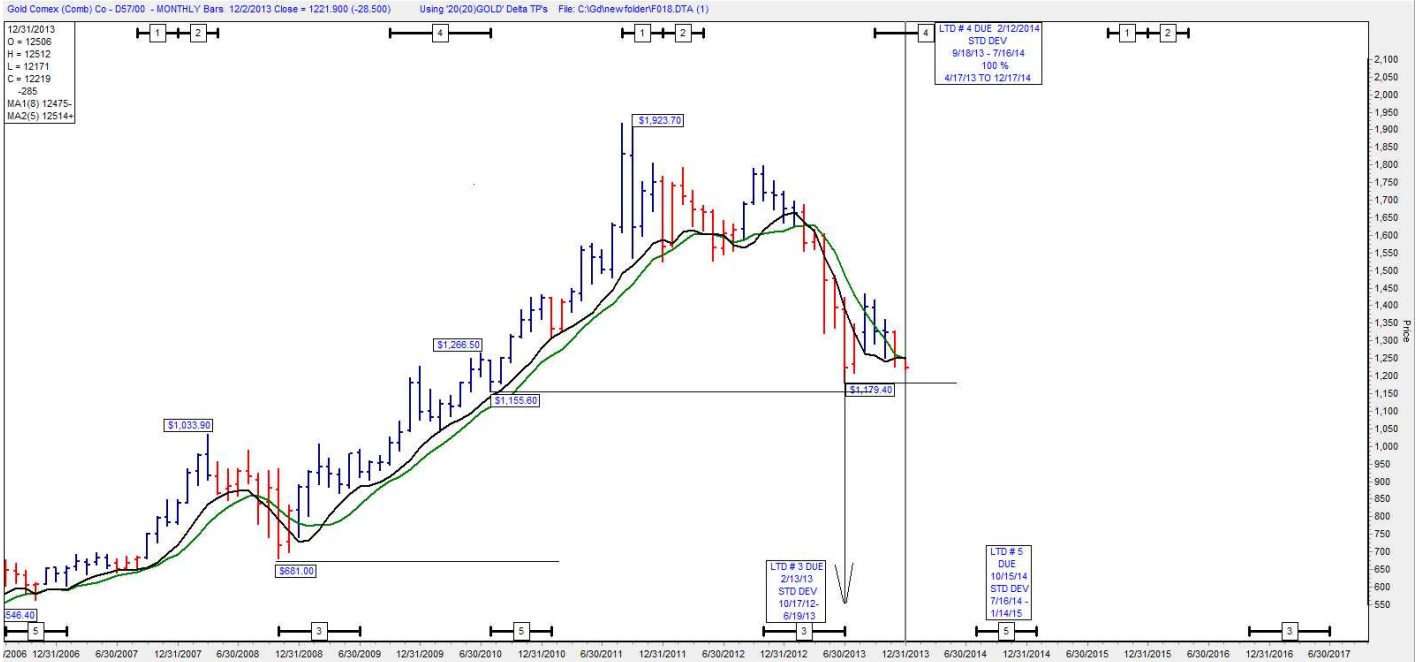

“Old age and treachery will always beat youth and exuberance”

AND NOW FOR THE MOST IMPORTANT NEWS

Your old Cap'n is always out there looking to protect his crew from those who would try to steer them away from the biggest gold bull market this planet has ever seen. *Gold bottomed 7 months ago and crude oil broke out seven months ago. The bull is alive and well. He started up 7 months ago. It takes an old one who is familiar with the treacheries of the markets to protect his crew.*

“The targeted move for a triangle is measured vertically at the start of the triangle: from the first trough or peak to the opposite border of the triangle. The move is then projected vertically from the point of breakout to the actual target.”

Target Measurement

“The targeted move for a triangle is measured vertically at the start of the triangle: from the first trough or peak to the opposite border of the triangle. The move is then projected vertically from the point of breakout to the actual target.”

EXAMPLE

Foodland Associated Limited (Australia) shows a symmetrical triangle in an up-trend.

1. The targeted move is measured from the trough at [1] vertically to the opposite border:

$$\text{Move} = 13.07 - 10.50 = 2.57$$

2. The move is then projected from the point of breakout at [2].

3. The target is calculated as the value at the breakout point [2] plus the move:

$$\text{Target} = 12.42 + 2.57 = 14.99$$
