REPORT DOLLAR INDEX UPDATE  
-----

**Thats Life**

**Question**

**When will the U. S. Dollar Collapse?**

**Answer**

**When the Collective Human Unconscious says it will.**

**Question**

**What is the Collective Human Unconscious?**

**Answer**

**[Collective unconscious | psychology | Britannica.com](#)**

**<https://www.britannica.com/science/collective-unconscious>**

**“Collective unconscious, term introduced by psychiatrist Carl Jung to represent a form of the unconscious (that part of the mind containing memories and impulses of which the individual is not aware) common to mankind as a whole and originating in the inherited structure of the brain.”**

**Question**

**Is there any possible way to measure or understand what the Collective Human Unconscious is telling us about the U. S. Dollar’s future?**

**Answer**

**Yes there is. The way to measure or understand what the Collective Human Unconscious is telling us about the future path of the U. S. Dollar is to apply the Elliott Wave Theory to a long term chart of the Dollar Index.**

**Question**

**What is the Elliott Wave Theory**

**<http://www.elliottwave.net/educational/basictenets/basics1.htm>**

**Basic Tenets of the Elliott Wave Principle**

**“The Wave Principle” is Ralph Nelson Elliott’s discovery that social, or crowd, behavior trends and reverses in recognizable patterns. Using stock market data for the Dow Jones Industrial Average (DJIA) as his main research tool, Elliott discovered that the ever-changing path of stock market prices reveals a structural design that in turn reflects a basic harmony found in nature. From this discovery, he developed a rational system of market analysis.**

**Under the Wave Principle, every market decision is both *produced by* meaningful information and *produces* meaningful information. Each transaction, while at once an *effect*, enters the fabric of the market and, by communicating transactional data to investors, joins the chain of *causes* of others’ behavior. This feedback loop is governed by man’s social nature, and since he *has* such a nature, the process generates forms. As the forms are repetitive, they have predictive value.**

.....  
.....

**Question**

**O. K., what is so special about analyzing the Collective Human Unconscious response in the stock and commodity markets using the Elliott Wave Theory.**

**Answer**

**Nothing, absolutely nothing is special about analyzing the Collective Human Unconscious response in the stock and commodity markets using the Elliott wave Theory.**

**We humans have examined hundreds if not thousands of species of animals and observed and recorded how and when they will react to the environment they are in. We know exactly what they will do and how they will react in response to a changing environment. This is a Species Specific analysis.**

**The major problem for humans when it comes to analyzing and applying a Human Species Specific analysis (Elliott Wave Theory) to movements in the stock and commodity markets is that we humans tend to find it difficult to believe that we are part of or one of the animal species occupying this planet we all live on.**

.....

**O. K. we humans fight, we kill, we rape, we steal, we protect our own, we kill our own, we love, we hate, and we do not trust other species. Sounds very animal like doesn't it. However, some animal species are much more "God Like" than we Humans.**

**If you want a quick and easy way to understand the Wave Theory you will find it at this address;**

**<http://www.elliottwave.net/educational/basictenets/basics1.htm>**

**The easy way to apply the Elliott Wave Theory to the Dollar Index is to understand that a Major move has five waves and a corrective move has three waves.**

**The patterns of the five and three waves may vary but the five and three will not vary if the move is truly taking place.**

**Five waves up and three waves down is a bull move.**

**Five waves down and three waves up is a bear move.**

## Five waves down and three waves up is a bear move.

.....  
The Dollar Index began a 5 wave decline in September 2001. That decline bottomed at 71.05 in June 2008. From that point forward a Zig-Zag 3 wave Bear Market Correction began. It topped at 103.815 in March 2017. The Bear Market decline resumed and wave 1 down is complete. Wave 2 appears to have topped at 97.705. The move down that began at 103.815 should be another 5 wave decline. If this 5 wave decline equals the previous five wave decline the dollar Index will bottom at 53.575.

The previous five wave decline was 121.29 minus 71.05 which equals a decline of 50.24 points.

The three wave corrective high topped at 103.815. Subtracting 50.24 points from the three wave corrective high of 103.815 will produce a 5 wave low for the Dollar Index of 53.575.

A low of 53.575 ...

and the collective human unconscious will consciously wake up, and know that it is

**Busted**
